In the January '67 meeting of the CCB we were instructed to deliver to your organization the modified Versatile Stereoscope procured as part of the effort on PAR 82M of Contract Task A.

25X1 25X1

This instrument was purchased with the 1X Rhomboid Arms only to provide 7X to 30X overall magnification with the 10X eyepiece supplied. It was modified by the vendor to provide longer (1.3 inches) than normal Rhomboid Arms to aid in viewing stereo image pairs present in two film print rolls placed side-by-side across a viewing table. In this instrument the offset distance for each Rhomboid Arm is 7.5 inches. With the body of the stereoscope oriented to make its normal side-to-side direction parallel to the lengths of the two film webs, an image pair separated by 15 inches across the pair of film webs can be registered for viewing.

The additional arm length in the Stereoscope was achieved at the sacrifice of mechanical clearance between the lower surfaces of the arms and the film plane. The focus mechanism was repositioned to lower the entire Stereoscope assembly relative to the Scanning Stage and Base.

A copy of the manual published by the vendor for the standard Versatile Stereoscope is enclosed in the shipping cartons with the equipment.

This equipment is being shipped 2-15-67 via Mil-Air on shipper Q-67XD57. The DD-250 forms covering the equipment are enclosed in box #1 of 5 packing boxes covering this shipment. When you have received the shipment and are sure it is as represented please sign the required copy and return it to us.

13 March 1967

Dear Ed,

This is to advise you that the Stereoscope complete in five (5) boxes was received in this Center 20 February and has been checked out to everyone's satisfactory. We appreciate your personal action in this matter, and you can rest assured that Uncle Sam is already benefiting from its daily use.

Bud
